EXPLANATORY NOTES

Special Note

Statistics shown in this publication cannot be compared with those published during the period 1973-74 to 1978-79 inclusive. This is due to the erroneous inclusion in earlier periods of a large number of claims of less than one day not within the scope of the collection.

2. The effect of these errors is to overstate the number of claims closed as published in bulletins issued between 1973-74 and 1978-79. In percentage terms the degree of overstatement can be gauged from the table shown below.

Year	Total accidents No.	Percentage overstated (approximate)
1973-74	29,445	10
1974-75	32,305	11
1975-76	31,202	18
1976-77	34,565	23
1977-78	31,105	24
1978-79	37,153	30

3. As a consequent of these errors previous data relating to average cost and average time lost would be understated.

4. The number of fatal accidents in previous years is also of doubtful validity. A check of records for the current year with those of earlier years suggests that some fatalities arising out of chronic disease may have been wrongly identified as accident cases.

5. A new system of collecting and compiling industrial accident statistics more closely aligned with principles recommended by the International Labour organisation is being developed and will operate from 1 July 1981.

Explanatory Notes

6. The statistics contained in this publication are derived from details of claims for workers' compensation paid by insurers and self-insurers. They relate to claims reported to have been closed during the year ended 30 June 1980.

7. The figures do not represent all industrial accidents which actually occurred during the year because:

- (i) they refer to claims closed;
- (ii) in the case of non-fatal accidents, they include only those which resulted in absence from work for one day or more;

(iii) only accidents coming within the scope of the Workers' Compensation Act are included in the statistics, which therefore exclude industrial accidents resulting in the death of, or injury to, self-employed persons and persons employed by the Australian Government. (Compensation for Australian Government employees is provided by the Compensation (Australian Government Employees) Act 1971);

(iv) the statistics include only accidents occurring at the work site or in the course of the worker's normal duties and do not therefore include 'journey' cases, i.e. death of, or injury to, an employee while travelling between his place of residence and the place of employment. During the year ended 30 June 1980, 781 claims were reported closed in respect of 'journey' cases involving loss of work of one day or more, the total time lost being 3,608 weeks and the cost of claims, \$839,374.

8. The statistics relate only to accidents, and particulars of cases of industrial disease are therefore excluded.

9. For the purpose of these statistics, each claim is treated as a separate industrial accident and data are prepared from details of claims reported closed during the year under review (in this instance, the year ended 30 June 1980). In respect of reopened claims, the additional time lost and additional costs are included in the tables but, to avoid duplication, such cases have been excluded from the numbers of accidents shown.

10. The following notes on terms used should be borne in mind when considering the data shown in the tables.

Time lost means the total time lost (i.e. from date of injury) in respect of claims reported closed during the year. The term is therefore not necessarily restricted to time lost during the year under review, since the accident may have occurred in an earlier year.

Cost of claims means the total amount of payments made (principally in the form of compensation for loss of wages, and for medical and hospital expenses, and lump-sum settlements) in respect of claims reported closed during the year. The figures do not therefore necessarily represent amounts actually paid in the year under review.

Accident factor means 'that underlying agency, other than human failing, which appears to contribute most materially to an accident and which would be most likely to receive attention in preventing the occurrence of a similar accident'.

Site of injury descriptions as shown in Table 3 on page 10 and Table 5 on page 14 are, in most cases, in an abbreviated form. A more detailed description of site of injury is given below:

Head, excluding eyes
 Eye(s)
 Neck, including vertebral column
 Trunk, excluding shoulder and vertebral column
 Arm, including shoulder and wrist
 Hand, including finger(s) but excluding wrist
 Leg, including hip and ankle
 Foot, including toe(s)
 Site unspecified
 Miscellaneous reactions.

Industry. The industry classification used throughout this bulletin is the 'Australian Standard Industrial Classification' (ASIC), described in the publication 'Australian Standard Industrial Classification' 1978 Edition, Volume 1, issued by the Australian Statistician, Canberra. This classification is not directly comparable with the one used for industrial accident statistics for earlier years.
